

MediCare — Phase 4: Process Automation (Admin)

Goal: Automate manual steps such as validation, reminders, approvals and notifications so appointments and cases move automatically without human follow-ups.

1. Validation Rules

- A validation rule created on **Appointment** object to ensure **Appointment Date/Time** is **always in the future** and to **Prevent invalid data (zero or negative duration)**.
- This prevents Receptionists from scheduling appointments in the past and improves data accuracy.

The screenshot shows the Salesforce Setup interface. The left sidebar contains a navigation menu with options like Details, Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, List View Button Layout, Restriction Rules, Scoping Rules, and Object Access. The main content area is titled 'Appointment' and shows 'Validation Rules' for the 'Appointment' object. There are 2 items, sorted by Rule Name. The table lists the following rules:

RULE NAME	ERROR LOCATION	ERROR MESSAGE	ACTIVE	MODIFIED BY
VR_AppointmentDate_InFuture	Appointment Date/Time	Appointment Date/Time must be in the future.	✓	Swaroop Admin, 18/09/2025, 9:33 pm
VR_Duration_Positive	Duration (Minutes)	Duration must be greater than zero.	✓	Swaroop Admin, 18/09/2025, 9:34 pm

Fig.1 ValidationRules

The screenshot shows the MediCare Appointments form. The form is titled 'Appointment' and has a 'Recently Viewed' list on the left. The form fields include Patient (testing user), Appointment Date/Time (01/09/2024, 12:00 pm), Status (Scheduled), Doctor (Anita Sharma), Duration (Minutes) (-10), Source (Phone), and Location (Kakinada). The form is showing validation errors for the Appointment Date/Time and Duration (Minutes) fields. A confirmation dialog is displayed over the form, asking 'We hit a snag. Review the following fields' and listing 'Duration (Minutes)' and 'Appointment Date/Time' as fields to review. The dialog has 'Cancel', 'Save & New', and 'Save' buttons.

2. Email Templates for Automation

Two classic email templates were created and stored under Private Email Templates:

- **ET_Appointment_Confirmation** – sends confirmation to the patient when an appointment is created or confirmed.

The screenshot shows the 'ET_Appointment_Confirmation' email template in the MediCare system. The interface includes a search bar at the top, a navigation menu with 'MediCare' and various dropdowns, and a header for the template. The 'Details' tab is active, showing fields for 'Email Template Name' (ET_Appointment_Confirmation), 'Description', 'Made in Email Template Builder' (unchecked), 'Related Entity Type' (Appointment), 'Folder' (Private Email Templates), 'Subject' (Appointment confirmation — {{{Recipient.Name}}}), 'HTML Value' (Hello {{{Recipient.FirstName}}}...! Your appointment is confirmed. Thank you, MediCare Connect Team), and 'Enhanced Letterhead'. The 'Additional Information' section at the bottom shows the template was created by Swaroop Admin on 18/09/2025 at 11:02 pm and last modified by Swaroop Admin on 19/09/2025 at 10:36 pm.

Fig.3 Appointment Confirmation Template

- **ET_Appointment_Reminder** – sends a reminder email to the patient the day before appointment.

The screenshot shows the 'ET_Appointment_Reminder' email template in the MediCare system. The interface is similar to the previous one, with a search bar, navigation menu, and header. The 'Details' tab is active, showing fields for 'Email Template Name' (ET_Appointment_Reminder), 'Description', 'Made in Email Template Builder' (unchecked), 'Related Entity Type' (Appointment), 'Folder' (Private Email Templates), 'Subject' (Appointment reminder — {{{Recipient.Name}}}), 'HTML Value' (Hello {{{Recipient.Name}}}...! Reminder: Your Appointment is Tomorrow. Thank you, MediCare Connect Team), and 'Enhanced Letterhead'. The 'Additional Information' section at the bottom shows the template was created by Swaroop Admin on 18/09/2025 at 11:14 pm and last modified by Swaroop Admin on 19/09/2025 at 10:47 pm.

3. Flow for Appointment Confirmation

A record-triggered flow “**Appointment_Confirm_Flow**” built on **Appointment** object:

- **Trigger:** When record is created or when Status changes to “Confirmed.”
- **Action:**
 - Update “Confirmation Sent” checkbox on the Appointment.
 - Send the **ET_Appointment_Confirmation** email template to the Patient’s email.

This ensures every new or confirmed appointment automatically sends confirmation to the patient.

Fig.5 Appointment Confirm Flow

4. Reminder Notification & Email (Scheduled Path)

A separate **Appointment Remainder Flow** was created for sending reminder notifications:

- **Scheduled Path:** This path is triggered to run **1 day before Appointment Date/Time**.
- **Action:** Send the **ET_Appointment_Reminder** email to the Patient.

This ensures that the patient is reminded 24 hours before the appointment, ensuring they are well-informed and prepared.

Fig.6 Appointment Remainder Flow

6. Quick Action – “Mark as Completed”

A Quick Action added on Appointment object:

- **Action Type:** Update a Record.
- **Predefined Field Values:** Status__c = “Completed.”
- Placed on Appointment page layout to allow one-click completion of appointments.

Action	Field Name	API Name	Field Type	Value
Mark as Completed	Status	Status__c	Picklist	Completed

Fig.7 Mark As Completed Quick Action detail

8. Testing & Results

Sample Appointments were created to test the automation:

- Receptionist creates Appointment → Patient immediately receives confirmation email.
- Day before Appointment → Patient receives reminder email.
- Quick Action “Mark as Completed” updates Status with one click.
